# Preface

The International Conference on Artificial Neural Networks (ICANN) is the annual flagship conference of the European Neural Network Society (ENNS). Its wide scope in neural networks ranges from machine learning algorithms to models of real nervous systems. ICANN aims at bringing together researchers from different research fields, such as computer science, neuroscience, cognitive science, and engineering. Further aims are to address new challenges, share solutions, and discuss future research directions toward developing more intelligent artificial systems and increasing our understanding of neural and cognitive processes in the brain.

The ICANN series of conferences was initiated in 1991 and soon became the major European conference in its field, with experts coming from several continents. The 24th ICANN was held during 15–19 September 2014 at the University of Hamburg. The hosts were the University of Hamburg and its Knowledge Technology Institute (<http://www.informatik.uni-hamburg.de/WTM/>).

The conference attracted contributions from among the most internationally established researchers in the neural network community. The six keynote speakers in 2014 covered a wide spectrum: Christopher M. Bishop, expert in machine learning; Jun Tani, expert in recurrent neural networks; Paul F.M.J. Verschure, expert in autonomous systems; Yann LeCun, expert in neural vision; Barbara Hammer, expert in computational intelligence; Kevin N. Gurney, expert in computational neuroscience. We also acknowledge support from the Körber Foundation for a special session on “Human-Machine Interaction”.

A total of 173 papers was submitted to the ICANN 2014 conference. A large Program Committee, including accepted authors from recent ICANN conferences, performed altogether 744 reviews, delivering an average of 4.3 reviews per paper. This helped to obtain a reliable evaluation score for each paper, which was computed by the Springer Online Conference Service (OCS) by averaging the reviewers’ ratings and taking into account the reviewers’ confidences. Papers were sorted with respect to their scores (see figure) and 108 papers with a score of 2.0 or higher were accepted. Furthermore, the multiple professional reviews delivered valuable feedback to all authors.

The conference program featured 24 sessions, which contained 3 talks each, and which were arranged in 2 parallel tracks. There were 2 poster sessions with 33 posters and 2 live demonstrations of research results. Talks and posters were categorized into topical areas, providing the titles for the conference sessions and for the chapters in this proceedings volume. Chapters are ordered roughly in chronological order of the conference sessions.

We would like to thank all the participants for their contribution to the conference program and for their contribution to these proceedings. Many thanks go to the local organizers for their support and hospitality. We also express our sincere thanks to all active reviewers for their assistance in the review procedures and their valuable comments and recommendations.

## Recurrent Networks

### *Sequence Learning*

Dynamic Cortex Memory: Enhancing Recurrent Neural Networks for Gradient-Based Sequence Learning . . . . .	1
<i>Sebastian Otte, Marcus Liwicki, and Andreas Zell</i>	
Learning and Recognition of Multiple Fluctuating Temporal Patterns Using S-CTRNN . . . . .	9
<i>Shingo Murata, Hiroaki Arie, Tetsuya Ogata, Jun Tani, and Shigeki Sugano</i>	
Regularized Recurrent Neural Networks for Data Efficient Dual-Task Learning . . . . .	17
<i>Sigurd Spieckermann, Siegmund Düll, Steffen Udluft, and Thomas Runkler</i>	

### *Echo State Networks*

On-line Training of ESN and IP Tuning Effect . . . . .	25
<i>Petia Koprinkova-Hristova</i>	
An Incremental Approach to Language Acquisition: Thematic Role Assignment with Echo State Networks . . . . .	33
<i>Xavier Hinaut and Stefan Wermter</i>	
Memory Capacity of Input-Driven Echo State Networks at the Edge of Chaos . . . . .	41
<i>Peter Barančok and Igor Farkaš</i>	
Adaptive Critical Reservoirs with Power Law Forgetting of Unexpected Input Sequences . . . . .	49
<i>Norbert Michael Mayer</i>	

### *Recurrent Network Theory*

Interactive Evolving Recurrent Neural Networks Are Super-Turing Universal . . . . .	57
<i>Jérémie Cabessa and Alessandro E.P. Villa</i>	
Attractor Metadynamics in Adapting Neural Networks . . . . .	65
<i>Claudius Gros, Mathias Linkerhand, and Valentin Walther</i>	

Basic Feature Quantities of Digital Spike Maps ..... 73  
*Hiroki Yamaoka, Narutoshi Horimoto, and Toshimichi Saito*

**Competitive Learning and Self-Organisation**

Discriminative Fast Soft Competitive Learning ..... 81  
*Frank-Michael Schleif*

Human Action Recognition with Hierarchical Growing Neural Gas Learning ..... 89  
*German Ignacio Parisi, Cornelius Weber, and Stefan Wermter*

Real-Time Anomaly Detection with a Growing Neural Gas ..... 97  
*Nicolai Waniek, Simon Bremer, and Jörg Conradt*

Classification with Reject Option Using the Self-Organizing Map ..... 105  
*Ricardo Sousa, Ajalmar R. da Rocha Neto, Jaime S. Cardoso, and Guilherme A. Barreto*

**Clustering and Classification**

A Non-parametric Maximum Entropy Clustering ..... 113  
*Hideitsu Hino and Noboru Murata*

Instance Selection Using Two Phase Collaborative Neighbor Representation ..... 121  
*Fadi Dornaika and I. Kamal Aldine*

Global Metric Learning by Gradient Descent ..... 129  
*Jens Hocke and Thomas Martinetz*

Leaving Local Optima in Unsupervised Kernel Regression ..... 137  
*Daniel Lückehe and Oliver Kramer*

**Trees and Graphs**

An Algorithm for Directed Graph Estimation ..... 145  
*Hideitsu Hino, Atsushi Noda, Masami Tatsuno, Shotaro Akaho, and Noboru Murata*

Merging Strategy for Local Model Networks Based on the Lolimot Algorithm ..... 153  
*Torsten Fischer and Oliver Nelles*

Factor Graph Inference Engine on the SpiNNaker Neural Computing System ..... 161  
*Indar Sugiarto and Jörg Conradt*

High-Dimensional Binary Pattern Classification by Scalar Neural Network Tree . . . . .	169
<i>Vladimir Kryzhanovsky, Magomed Malsagov, Juan Antonio Clares Tomas, and Irina Zhelavskaya</i>	

## Human-Machine Interaction

Human Activity Recognition on Smartphones with Awareness of Basic Activities and Postural Transitions . . . . .	177
<i>Jorge-Luis Reyes-Ortiz, Luca Oneto, Alessandro Ghio, Albert Samá, Davide Anguita, and Xavier Parra</i>	

sNN-LDS: Spatio-temporal Non-negative Sparse Coding for Human Action Recognition . . . . .	185

## Lecture Notes in Computer Science

The LNCS series reports state-of-the-art results in computer science research, development, and education, at a high level and in both printed and electronic form. Enjoying tight cooperation with the R&D community, with numerous individuals, as well as with prestigious organizations and societies, LNCS has grown into the most comprehensive computer science research forum available.

The scope of LNCS, including its subseries LNAI and LNBI, spans the whole range of computer science and information technology including interdisciplinary topics in a variety of application fields. The type of material published traditionally includes

- proceedings (published in time for the respective conference)
- post-proceedings (consisting of thoroughly revised final full papers)
- research monographs (which may be based on outstanding PhD work, research projects, technical reports, etc.)

More recently, several color-cover sublines have been added featuring, beyond a collection of papers, various added-value components; these sublines include

- tutorials (textbook-like monographs or collections of lectures given at advanced courses)
- state-of-the-art surveys (offering complete and mediated coverage of a topic)
- hot topics (introducing emergent topics to the broader community)

In parallel to the printed book, each new volume is published electronically in LNCS Online.

Detailed information on LNCS can be found at [www.springer.com/lncs](http://www.springer.com/lncs)

Proposals for publication should be sent to
