Proceedings of the
International Workshop on

Petri
Nets and
Software
Engineering

PNSE'07

Siedlce, Poland, June 2007

Preface

This booklet contains the proceedings of the International Workshop on Petri Nets and Software Engineering (PNSE'07) in Siedlce, Poland, June 25-26, 2007. It is a satellite event of *Petri Nets 2007*, the 28th International Conference on Application and Theory of Petri Nets and Other Models of Concurrency.

PNSE'07 is organized by institutes from Eindhoven University of Technology, The Netherlands, the University of Hamburg, Germany, the University Pierre et Marie Curie-CNRS 4, Paris, France, the University of Toulouse, France, and the University of Zaragoza, Spain with the local support of the University of Podlasie, Institute of Computer Science and the University of Warsaw, Institute of Computer Science, PAS.

More information about the workshop can be found at

<http://www.informatik.uni-hamburg.de/TGI/events/pnse07/>

For the successful realization of complex systems of interacting and reactive software and hardware components the use of a precise language at different stages of the development process is of crucial importance. Petri nets are becoming increasingly popular in this area, as they provide a uniform language that supports the tasks of modeling, validation and verification. Their popularity is due to the fact that fundamental aspects of causality, concurrency and choice are captured by Petri nets in a natural and mathematically precise way without compromising readability.

The use of Petri nets (P/T-nets, colored Petri nets and extensions) in the formal process of software engineering, covering modeling, validation, and verification, are presented as well as their application and tools supporting the disciplines mentioned above.

The intention of this workshop is to bring together research and application to have a lively mutual exchange of ideas, view points, knowledge, and experience. The submitted papers were evaluated by a program committee, which was supported by several other international experts resulting in at least three reviews per submitted paper. The program committee consists of:

Wil van der Aalst (The Netherlands)	Rémi Bastide (France)
Jonathan Billington (Australia)	Didier Buchs (Switzerland)
Piotr Chrzastowski-Wachtel (Poland)	José-Manuel Colom (Spain)
Jörg Desel (Germany)	Jorge C.A. de Figueiredo (Brasil)
Giuliana Franceschinis (Italy)	Nicolas Guelfi (Luxembourg)
Kees van Hee (The Netherlands)	Jens Bæk Jørgensen (Denmark)

Astrid Kiehn (India)	Ekkart Kindler (Germany)
Michael Köhler (Germany)	Fabrice Kordon (France)
Gabriela Kotsis (Austria)	Maciej Koutny (United Kingdom)
Sadatoshi Kumagai (Japan)	Charles Lakos (Australia)
Johan Lilius (Finland)	Rainer Mackenthun (Germany)
Daniel Moldt (Chair) (Germany)	Heiko Rölke (Germany)
Mark-Oliver Stehr (USA)	Tomas Vojnar (Czech Republic)
Jianli Xu (Finland)	Wlodek M. Zuberek (Canada)

We received 23 high-quality contributions. The program committee has accepted nine of them for full presentation. Furthermore, the committee accepted four papers as short presentations and three short papers (submitted as such). In addition, these proceedings contain eight (non refereed) poster contributions. The poster session is open to all participants of all conference events who want to present ongoing work and current / future projects.

All papers tackle the concepts of objects, components, and agents from different perspectives. Formal as well as application aspects demonstrate the range within which Petri nets can be used and illustrate at the same time that there is a tendency to use more abstract concepts for the analysis and design of Petri net-based models.

The international program committee was supported by the valued work of additional reviewers. Their work is highly appreciated.

The organizers of the PNSE'07 workshop

Contents

Part I Invited Talk

- 1 Frameworks for Software Architecture**
Kees van Hee 3

Part II Full Contributions (long presentation)

- 2 Process Mining in Petri Net-based Agent-oriented Software Development**
Lawrence Cabac, Nicolas Knaak 7
- 3 Composing Business Process with ID-Net**
Ang Chen and Didier Buchs 22
- 4 Time Recursive Petri net**
Dahmani Djaouida, J.M Ilié and M. Boukala 37
- 5 Designing Case Handling Systems**
Kees M. van Hee, Jeroen Keiren, Reinier Post, Natalia Sidorova, Jan Martijn van der Werf 52
- 6 Petri Net-Based Specification and Deployment of Organizational Models**
Michael Köhler, Matthias Wester-Ebbinghaus 67
- 7 Translating Message Sequence Charts to other Process Languages using Process Mining**
Kristian Bisgaard Lassen, Boudewijn F. van Dongen, Wil M.P. van der Aalst 82

8 An Automata-Theoretic Approach to Model-Checking of Petri Nets	
<i>Siamak Nazari and John Thistle</i>	98
9 Model driven testing based on test history	
<i>Isaac Corro Ramos, Alessandro Di Bucchianico, Lusine Hakobyan..</i>	112
10 On Petri-net synthesis and attribute-based visualization	
<i>H.M.W. Verbeek, A.J. Pretorius, W.M.P. van der Aalst, and J.J. van Wijk</i>	127
<hr/>	
Part III Full Contributions (short presentation)	
<hr/>	
11 Application Development with Mulan	
<i>Lawrence Cabac, Till Döriges, Michael Duvigneau, Christine Reese, Matthias Wester-Ebbinghaus</i>	145
12 Petri Nets in Modeling Component Behavior and Verifying Component Compatibility	
<i>Donald Craig and Wlodek Zuberek</i>	160
13 Modular state spaces and place fusion	
<i>C. Lakos, L. Petrucci</i>	175
14 An Approach to Evaluate System-Level Performance for Stochastic Object Petri-Nets	
<i>Reng Yin, Hao Hu, Jidong Ge, Xinyu Li, Jian Lu</i>	191
<hr/>	
Part IV Short Contributions	
<hr/>	
15 Tools for Testing, Debugging and Monitoring Multi-Agent Applications	
<i>Lawrence Cabac, Till Döriges</i>	209
16 Petri Nets Tools and Embedded Systems Design	
<i>Luis Gomes, João Paulo Barros, Anikó Costa</i>	214
17 Controlling OSGi Bundles with Petri Nets	
<i>Felix Simmendinger, Lawrence Cabac, Michael Duvigneau, Nicolas Knaak</i>	220

Part V Poster Contributions

18 Time Distribution for Structural Workflows <i>Piotr Chrzastowski-Wachtel, Pawel Findeisen, Grzegorz Wolny</i>	229
19 Towards a Formal Specification of a Generic Access Network Architecture using Coloured Petri Nets <i>Paul Fleischer</i>	231
20 VerICS 2006 - a Model Checker for Real-Time and Multi-Agent Systems <i>Magdalena Kacprzak, Wojciech Nabialek, Artur Niewiadomski, Wojciech Penczek, Agata Polrola, Maciej Szreter, Grzegorz Szymczuk, Bozena Wozna, and Andrzej Zbrzezny</i>	234
21 Verifying Timed Security Protocols with VerICS <i>Mirosław Kurkowski and Wojciech Penczek</i>	236
22 Translation of Promela to Timed Automata <i>W. Nabialek, P. Janowski</i>	238
23 UML Verification with Verics <i>Artur Niewiadomski</i>	240
24 Formal Modeling and Analysis of Flexible Processes in Mobile Ad-Hoc Networks <i>Julia Padberg, Hartmut Ehrig, Kathrin Hoffmann</i>	242
25 Towards Modeling Rational Agents with Object Oriented Petri Nets <i>Frantisek Zboril, Radek Koci and Vladimir Janousek</i>	244
